

ASSIGNMENT - 1

1. Define Artificial Intelligence and explain its major areas.
2. Discuss the historical development of AI.
3. What are production systems? Give examples.
4. Differentiate between human intelligence and artificial intelligence.
5. Describe the architecture of intelligent agents.
6. List and explain various AI applications in medicine and e-commerce.
7. What are the major issues in designing search algorithms?
8. Explain the characteristics of AI problems with examples.
9. Describe the Generate-and-Test search strategy with an example.
10. Explain Hill Climbing and mention its limitations.
11. What is the Best-First Search technique? Provide a working example.
12. Explain the A* algorithm with an example.
13. What is means-end analysis in problem-solving?
14. Describe the AO* algorithm and its use.
15. What is constraint satisfaction? How is it applied in AI?
