

ASSIGNMENT - 3

1. Define fuzzy sets. How are they different from classical sets?
2. What are membership functions? Explain with examples.
3. Describe fuzzy operations like union, intersection, and complement.
4. What are fuzzy propositions? Give examples.
5. Explain defuzzification and its techniques.
6. Explain syntactic and semantic analysis in NLP.
7. What is discourse and pragmatic processing in natural language?
8. Describe a basic spell checker using NLP.
9. What is a perceptron? How does it function?
10. Explain the architecture of a simple neural network.
11. List applications of neural networks in real life.
12. What is an expert system? Name two real-world examples.
13. Describe the architecture of an expert system.
14. How is knowledge represented in expert systems?
15. Give a brief overview of any two case studies on expert systems.
