

		Parul University Faculty of Engineering and Technology Parul Institute of Engineering and Technology Department of Artificial Intelligence and Data Science	
Subject Name	Theory of Computations	A.Y	2026-27
Subject Code	303105306	Semester	5
Blogs Links			
SR. NO.	Link		
1	GeeksforGeeks: GeeksforGeeks is one of the most popular learning platforms for computer science students. The platform includes solved examples, diagrams, quizzes, and interview-based questions which help students strengthen their understanding of ToC concepts. https://www.geeksforgeeks.org/theory-of-computation/theory-of-computation-automata-tutorials/		
2	TutorialsPoint: TutorialsPoint offers beginner-friendly tutorials on Automata Theory and Formal Languages. It explains concepts like DFA, NFA, Regular Languages, and Context-Free Languages. The step-by-step explanation style and easy examples make it highly useful for undergraduate students. https://www.tutorialspoint.com/automata_theory/index.htm		
3	Brilliant.org: Brilliant.org focuses on interactive learning and problem-solving. It provides visual explanations and practice-based learning for logic, algorithms, and computation theory. Students can improve their analytical thinking skills through quizzes and interactive exercises related to formal languages and automata concepts. https://brilliant.org/		
4	CSTheory StackExchange: CSTheory StackExchange is a discussion-based platform where researchers, professors, and students ask and answer questions related to Theory of Computation. This platform is especially useful for exploring conceptual doubts and research-oriented discussions. https://cstheory.stackexchange.com/		
5	Javatpoint: Javatpoint provides comprehensive tutorials on Automata Theory and Theory of Computation. Topics such as DFA, NFA, PDA, CFG, Turing Machines, and Chomsky Hierarchy are explained using simple examples and diagrams. The platform is suitable for semester exam preparation and quick revision. https://www.tutorialspoint.com/automata_theory/index.htm
